Abdul Aziz, A. M.	Combined cycle dynamics	247–258
Abel-Ghany, S. M.	Combined cycle dynamics	247–258
Agnew, B.	Optimization of an air-cooled hybrid gas turbine cycle (Brayton/Ericsson)	233–238
Agrawal, V. P.	Systems modelling of a coal-based steam power plant	259–278
Ahn, C.-S.	Aerodynamic design optimization of a compressor rotor with Navier–Stokes analysis	179–183
Ahn, J. W.	A practical approach to the hydraulic design and performance analysis of a mixed-flow pump for marine waterjet propulsion	659–664
Alata, M.	Transient behaviour of a thermoelectric device	615–621
Al-Nimr, M. A.	Transient behaviour of a thermoelectric device	615–621
Al-Zaharnah, I.	Energy and exergy use in the industrial sector of Saudi Arabia	481–492
Ammann, S.	Transonic radial compressor inlet design	367–374
Ananthkrishnan, N.	Global stability and control analysis of axial compressor stall and surge phenomena using bifurcation methods	279–286
Anderson, A.	Optimization of an air-cooled hybrid gas turbine cycle (Brayton/Ericsson)	233–238
Bannikov, M. G.	Reduction in NOx emission of diesel engines by cylinder catalysis	101–106
Barbosa, J. R.	A step further in gas turbine dynamic simulation	583–592
Barciela, J. P.	Cogeneration – the development and implementation of a cogeneration system for a chemical plant, using a reciprocating heavy fuel oil engine with supplementary fired boiler	493–504
Bell, M. A.	Thermodynamic design of a reciprocating Joule cycle engine	239–246
Bidini, G.	IPRP (Integrated Pyrolysis Regenerated Plant): gas turbine and externally heated rotary-kiln pyrolysis as a biomass and waste energy conversion system. Influence of thermodynamic parameters	519–528
Bohn, D. E.	Nucleation phenomena in a multi-stage low pressure steam turbine	453–460
Bohne, A.	Experimental investigation of unsteady flow phenomena in a three-stage axial compressor	341–348
Bross, S.	Stall inception phenomena in a single-stage axial-flow pump	471–479
Carapellucci, R.	Membrane systems for CO_2 capture and their integration with gas turbine plants	505–518
Cardamone, P.	Boundary layer investigations on a highly loaded transonic compressor cascade with shock/laminar boundary layer interactions	349–356
Casey, M.	Transonic radial compressor inlet design	367–374
Cerri, D.	Kinetic combustion neural modelling integrated into computational fluid dynamics	185–192
Chakraborty, G.	Selection of a steam generator pressure control program for a 500 MWe pressurized heavy water reactor power plant through transient analysis	631–642
Chana, K. S.	Heat transfer measurements on an intermediate-pressure nozzle guide vane tested in a rotating annular turbine facility, and the modifying effects of a non-uniform inlet temperature profile	421–432
Chattha, J. A.	Reduction in NOx emission of diesel engines by cylinder catalysis	101–106
Chew, P. E.	PF-fired supercritical power plant	35–43
Chiavola, O. P.	Combustion anomalies detection in SI engines from exhaust pressure signal processing	537–546
Chung, M. K.	A modified theory for the flow mechanism in a regenerative flow pump	311–322
Coelho, M.	Cogeneration – the development and implementation of a cogeneration system for a chemical plant, using a reciprocating heavy fuel oil engine with supplementary fired boiler	493–504
Creedy, D.	Coalbed methane extraction and utilization	19–25
da Cunha Alves, M. A.	A step further in gas turbine dynamic simulation	583–592
D'Alessandro, B.	IPRP (Integrated Pyrolysis Regenerated Plant): gas turbine and externally heated rotary-kiln pyrolysis as a biomass and waste energy conversion system. Influence of thermodynamic parameters	519–528
De, S.	Thermodynamic performance study of an integrated gasification fuel cell combined cycle – an energy analysis	137–147
De, S.	Thermodynamic performance study of an integral gasification fuel cell combined cycle: an exergy analysis	575–581
de la Rosa Blanco, E.	Influence of the state of the inlet endwall boundary layer on the interaction between pressure surface separation and endwall flows	433–442
Denton, J. D.	Towards long length scale unsteady modelling in turbomachines	75–82
Dincer, I.	Survey of thermodynamic methods to improve the efficiency of coal-fired electricity generation	63–73
Dincer, I.	Energy and exergy use in the industrial sector of Saudi Arabia	481–492
Draper, P. H.	Reduction in NOx emission of diesel engines by cylinder catalysis	101–106
Elder, R. L.	Numerical investigations of performance optimization using variable guide vanes in a multistage compressor of a 6MW gas turbine engine	593–603
Elrick, R.	An intelligent system for interpreting the nuclear refuelling process within an advanced gas-cooled reactor	159–167

El-shaer, H. M.	Combined cycle dynamics	247–258
Engber, M.	Effect of forward sweep in a transonic compressor rotor	357–366
Engeda, A.	Venturi valves for steam turbines and improved design considerations	219–230
Engeda, A.	A modified theory for the flow mechanism in a regenerative flow pump	311–322
Fantozzi, F.	IPRP (Integrated Pyrolysis Regenerated Plant): gas turbine and externally heated rotary-kiln pyrolysis as a biomass and waste energy conversion system. Influence of thermodynamic parameters	519–528
Feist, J. P.	Thermographic phosphor thermometry for film cooling studies in gas turbine combustors	193–200
Fottner, L.	Boundary layer investigations on a highly loaded transonic compressor cascade with shock/laminar boundary layer interactions	349–356
Freund, P.	Making deep reductions in CO_2 emissions from coal-fired power plant using capture and storage of CO_2	1–7
Frost, T. H.	Optimization of an air-cooled hybrid gas turbine cycle (Brayton/Ericsson)	233–238
Gaikwad, A. J.	Selection of a steam generator pressure control program for a 500 MWe pressurized heavy water reactor power plant through transient analysis	631–642
Gandhi, O. P.	Systems modelling of a coal-based steam power plant	259–278
Gavrilenko, P. N.	Reduction in NOx emission of diesel engines by cylinder catalysis	101–106
Ghosh, S.	Thermodynamic performance study of an integrated gasification fuel cell combined cycle – an energy analysis	137–147
Ghosh, S.	Thermodynamic performance study of an integral gasification fuel cell combined cycle: an exergy analysis	575–581
Gibbins, J.	Implementing the IAPWS Industrial Formulation 1997 for thermodynamic properties of water and steam in Mathcad	653–658
Goltz, I.	Stall inception phenomena in a single-stage axial-flow pump	471–479
Göttlich, E.	Influence of blade passing on the stator wake in a transonic turbine stage investigated by a particle image velocimetry and laser vibrometry	385–392
Govardhan, M.	Performance and wall static pressure measurements on centrifugal compressor diffusers	547–558
Greim, R.	Optimization of blade-diffuser interaction for improved turbine performance	443–452
Hampel, B.	Influence of blade passing on the stator wake in a transonic turbine stage investigated by a particle image velocimetry and laser vibrometry	385–392
He, Z.	Operating characteristics of an air-source heat pump under frosting/defrosting conditions	623–629
Heitmeir, F.	Influence of blade passing on the stator wake in a transonic turbine stage investigated by a particle image velocimetry and laser vibrometry	385–392
Hennecke, D. K.	Effect of forward sweep in a transonic compressor rotor	357–366
Heyes, A. L.	Thermographic phosphor thermometry for film cooling studies in gas turbine combustors	193–200
Hilgenfeld, L.	Boundary layer investigations on a highly loaded transonic compressor cascade with shock/laminar boundary layer interactions	349–356
Hodson, H. P.	Unsteady dissipation measurements on a flat plate subject to wake passing	413–420
Hodson, H. P.	Influence of the state of the inlet endwall boundary layer on the interaction between pressure surface separation and endwall flows	433–442
Höhn, W.	Numerical and experimental investigation of unsteady flow interaction in a low-pressure multistage turbine	211–217
Hossain, M.	Modelling of a bluff body stabilized CH4/H2 flame based on a laminar flamelet model with emphasis on NO prediction	201–210
Hotchkiss, R.	Coal gasification technologies	27–33
Howie, D.	An intelligent system for interpreting the nuclear refuelling process within an advanced gas-cooled reactor	159–167
Hoynacki, A.	Experimental investigation of unsteady flow phenomena in a three-stage axial compressor	341–348
Hussain, M. M.	Energy and exergy use in the industrial sector of Saudi Arabia	481–492
Hynes, T. P.	Towards long length scale unsteady modelling in turbomachines	75–82
Ishizuka, M.	Studies on natural convection-induced flow and thermal behaviour inside electronic equipment cabinet model	323–328
Issac, J. M.	Performance and wall static pressure measurements on centrifugal compressor diffusers	547–558
Jassim, R. K.	Computer simulation of thermoeconomic optimization of periodic-flow heat exchangers	559–570
Jidong, L.	Experimental study on the damage of a 125MW steam turbine rotor	643–651
Jones, T. V.	Heat transfer measurements on an intermediate-pressure nozzle guide vane tested in a rotating annular turbine facility, and the modifying effects of a non-uniform inlet temperature profile	421–432
Kablitz, S.	Effect of forward sweep in a transonic compressor rotor	357–366
Kang, S.-H.	Calculations of three-dimensional viscous flow in a multiblade centrifugal fan by modelling blade forces	287–298
Kim, K.-Y.	Aerodynamic design optimization of a compressor rotor with Navier–Stokes analysis	179–183
Kim, K.-Y.	Calculations of three-dimensional viscous flow in a multiblade centrifugal fan by modelling blade forces	287–298
Kim, S. Y.	Numerical investigation of flowing processes for regenerators of transport gas turbine units	299–310
Kim, K. S.	A practical approach to the hydraulic design and performance analysis of a mixed-flow pump for marine waterjet propulsion	659–664
Kitamura, Y.	Studies on natural convection-induced flow and thermal behaviour inside electronic equipment cabinet model	323–328
